SUMMARY

Full-Stack Software Engineer with 4 years of experience building scalable backend systems, cloud-native platforms, and modern web applications using Python, Java, React, and FastAPI.

TECHNICAL SKILLS

Languages: Python, Java, Go, TypeScript, JavaScript, SQL, Bash

Backend & APIs: FastAPI, Spring Boot, Node.js, REST APIs, GraphQL, WebSocket, Microservices

Frontend: React, Next.js, Tailwind CSS

AI & Agent Frameworks: LangChain, LangGraph, Google ADK, RAG

Databases & Caching: PostgreSQL, MySQL, MongoDB, SQLite, Redis

Cloud & DevOps: Kubernetes, Docker, AWS, GCP, ArgoCD, Crossplane, GitOps

PROFESSIONAL EXPERIENCE

Nagarro

Senior Software Engineer

Jul 2022 – Present

Gurugram, India

Observability Platform

- Designed and built a full-stack observability platform (React, FastAPI/Python, REST APIs) used to analyze traces, latency, failures, and runtime behavior across eight product domains.
- Built dashboards and telemetry views that sped up debugging of application issues; used logs, traces, and health signals to isolate failures and support operational troubleshooting.

Internal Developer Platform

- Built a cross platform CLI for a Kubernetes-native Internal Developer Platform, automating developer onboarding, project scaffolding, and self-service workflows; shipped and distributed the CLI for multiple environments.
- Implemented Git-based CI/CD with ArgoCD and Crossplane for infrastructure provisioning, application deployment, service rollout, and environment health checks used by engineering teams in UAT-like and production paths.

ADX – Abu Dhabi Securities Exchange

- Designed Java Spring Boot microservices and REST APIs serving 1M+ users and millions of daily requests, with Redis caching, AWS SQS async workflows, and WebSocket streaming for 100K+ concurrent market-data connections.
- Improved production reliability through caching, async processing, and security hardening: 35% lower API latency, 99.9% uptime, and 60% fewer reported vulnerabilities; supported production issues via log analysis and service-level debugging.

SIDE PROJECTS

AI Observability Dashboard

GitHub

- Open-sourced a React + FastAPI dashboard with OpenTelemetry and BigQuery for end-to-end telemetry visualization, log/trace analysis, and operational debugging.

Dockerized Arduino CLI Environment

GitHub

- Packaged a Linux/Docker CLI environment with reproducible builds, per-project dependencies, and automated artifact upload to Amazon S3.

OPEN SOURCE CONTRIBUTIONS

Streamlit | TypeScript, Python, Open Source

github.com/streamlit/streamlit

- Identified and fixed GitHub issue #16003 (framework fix + tests); merged into the Streamlit codebase, end-to-end debugging from issue repro to production merge.

EDUCATION

Dr. A. P. J. Abdul Kalam Technical University

Bachelor of Technology in Computer Science and Engineering

Jul 2018 – Jul 2022

Lucknow, India

CERTIFICATIONS

- The Linux Foundation: Open Source Software Development, Linux & Git Specialization
