SUMMARY

Full-Stack Software Engineer with 4 years of experience building scalable backend systems, cloud-native platforms, and modern web applications using Python, Java, React, and FastAPI.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, Bash

Backend: FastAPI, Spring Boot, Node.js, REST APIs, GraphQL, WebSocket, Microservices

Cloud & DevOps: Kubernetes, Docker, AWS, GCP, ArgoCD, Crossplane, GitOps

Frontend: React, Next.js, Tailwind CSS

AI & Agent Frameworks: LangChain, LangGraph, Google ADK, RAG

Databases and Caching: PostgreSQL, MySQL, MongoDB, SQLite, Redis

PROFESSIONAL EXPERIENCE

Nagarro

Senior Software Engineer

Jul 2022 – Present

Gurugram, India

Observability Platform

- Designed and built a full-stack observability platform using React, FastAPI, and OpenTelemetry, enabling engineers to analyze traces, latency, failures, and runtime behavior across eight product domains.
- Developed interactive dashboards and telemetry visualizations that accelerated debugging and operational insights for AI-agent workloads.

Internal Developer Platform

- Built a cross-platform CLI automating developer onboarding, project scaffolding, and self-service workflows for a Kubernetes-native Internal Developer Platform.
- Implemented backend platform capabilities using Spring Boot, ArgoCD, and Crossplane to support GitOps-based infrastructure provisioning and deployment workflows.
- Participated in platform architecture and design discussions while contributing to a self-service platform adopted by 20+ engineering teams, reducing provisioning time from days to under 30 minutes.

ADX – Abu Dhabi Securities Exchange

- Designed Spring Boot microservices serving 1M+ users and millions of daily requests, implementing Redis caching, AWS SQS workflows, and WebSocket streaming supporting 100K+ concurrent market data connections.
- Improved backend performance and platform reliability through caching, asynchronous processing, and security hardening, reducing API latency by 35%, maintaining 99.9% uptime, and lowering reported vulnerabilities by 60%.

SIDE PROJECTS

AI Observability Dashboard

GitHub

- Open-sourced an observability dashboard built with React, FastAPI, OpenTelemetry, and BigQuery, showcasing end-to-end telemetry visualization and analytics.

Dockerized Arduino CLI Environment

GitHub

- Dockerized Arduino CLI environment supporting reproducible builds, per-project dependencies, and automated binary uploads to Amazon S3.

OPEN SOURCE CONTRIBUTIONS

Streamlit | TypeScript, Python, Open Source

github.com/streamlit/streamlit

- Identified and resolved GitHub issue #16003 by implementing a framework fix, adding test coverage, and successfully merging the contribution into the Streamlit codebase.

EDUCATION

Dr. A. P. J. Abdul Kalam Technical University

Bachelor of Technology in Computer Science and Engineering

Jul 2018 – Jul 2022

Lucknow, India

CERTIFICATIONS

- The Linux Foundation: Open Source Software Development, Linux & Git Specialization
